DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Varadan et al (US Patent 6,525,691), cited by applicant, in view of Sievenpiper et al (US Patent 6,483,481).

Varadan et al disclose, in figure 5A, an antenna device comprising a dielectric substrate 22, a ground plane 26 that is perpendicular to the substrate or parallel to the substrate, see abstract, a fractal antenna 24 having a triangle outer configuration formed on the substrate. The substrate has a dielectric constant of in the range of about 10-600 or more and may be a ferroelectric, see abstract. The patent to Varadan et al differs from the claimed invention because it does not disclose a ground plane structure having at least a protrusion extending from the planar surface. Sievenpiper et al show, in figure 1, a high impedance surface or ground plane, a plurality of hexagon shaped pedestals, and a plurality of post interconnecting each of the pedestals and the planar surface. The patent to Sievenpiper also teaches that a thin antenna formed on the ground plane, see column 1, lines 13-18. Since one of ordinary skill in the art would have recognized the benefits of altering the electromagnetic properties, it would have

been obvious to provide the antenna system of Varadan et al with the ground plane structure as taught by Sievenpiper et al.

3. The patents to Pasper, Jr. et al, Diaz et al, Carson et al are cited as of interest showing the antenna similar to that disclosed.
